

Competitive Market Analysis Adjustment Guide

CMA Adjustments vary from one neighborhood to another and from one price range to another. There is no substitute for the actual extraction of the CMA adjustments from your market area.

This adjustment guide is offered as a possible solution for general adjustment values or when equalizing properties to extract significant adjustment values from a market area. These adjustment values are applicable to conforming front-range neighborhoods.

The adjustment values are segregated by price range. The upper portion of the following adjustment summary page reflects maximum estimated values for various components. As adjustment values may vary depending on quality, conditions etc., a sliding scale of adjustment value is offered in the lower section of the adjustment summary page.

Example:

View – Price Range \$0-\$200,000

If the maximum view adjustment of \$20,000 reflects the value added for the “best” view in this price range. According to the Standard Ratings scale, the best or “excellent view would receive 100% of this maximum view adjustment (\$20,000). If a property has an inferior, but above average view, 50% of the maximum adjustment would be used. If a property has an equal excellent view there would be no adjustment required (0% of the maximum view adjustment would be used).

	SUBJECT	COMP 1		COMP 2	
			<i>Adjustment</i>		<i>Adjustment</i>
ITEM					
View	Excellent	Above-Avg	+10,000	Excellent	No Adj

Please defer to your superior market knowledge when determining adjustment values for any specific property or property characteristic. The following are offered as possible adjustment values for your consideration.

We hope that you find this SPOTLIGHT beneficial.
